Homework 3

Data to be Used – Housing Data from Homework 2

1. Read the data and display the first and last six rows of the data.
2. Rename ALL columns with FOUR letter words.
3. Use the str() function to view the column names and data types for the table.
4. Check the 'type of ' variables Bedrooms and Baths. If they are not character, convert them to character.
5. Display the value counts for Quadrant.
6. Add a column named PercentTax that contains the percentage of Tax out of the total price of the house.
7. Add a column named PercentSize that contains the percentage of house size out of the total lot size of the house.
8. Use the apply() function to display the total PercentTax and total PercentSize.
9. Group and summarize the data that includes newly added columns.
10. Filter the data so that it only includes 3-Bedroom houses.
